

# MODEL RLS DUPLEX Control Panel

Single phase, duplex alternating pump control with override.

The Duplex Model RLS (Relay Logic Series™) control panel is designed to alternately control two 120, 208, or 240 VAC single phase pumps in water and sewage installations. The alternating action equalizes pump wear. In addition to the alternating pump control, this system provides override control should either pump fail. If an alarm condition occurs, an alarm switch activates the audio/visual alarm system. Common applications include pump chambers, sump pump basins, irrigation systems and lift stations.

## PANEL COMPONENTS
